#### ***Abortion Pill Reversal: A Woman's Second Chance to Choose Life ~ Part 2***

In last month's newsletter, we discussed the Abortion Pill, how it works, its legality and future ramifications. In this issue, we'll look at the medical treatment known as **Abortion Pill Reversal** as well as share stories of two clients who changed their minds after taking Mifepristone and the method that gave their babies a second chance at life.

**What is Abortion Pill Reversal and How Does It Work?** **Abortion Pill Reversal (APR)** is the medical protocol that is used to reverse the effects of Mifepristone (the first medication in the abortion pill regimen). After studying how Mifepristone affects the body, Drs. George Delgado and Matthew Harrison theorized the possibility that Mifepristone could be nullified with high doses of supplemental progesterone administered as soon as possible after the first abortion pill is taken. They discovered this treatment was effective on clinical trial patients who wished to save their babies.

Progesterone is a natural hormone that has been given routinely and safely to women since the 1950's. This common treatment has been proven effective to treat threatened miscarriages due to low progesterone levels as well as to reduce the risk of preterm deliveries. In a formal report, the FDA concluded there is no risk of birth defects with the use of progesterone.

**Since 2012, Abortion Pill Reversal has saved lives.** Since the implementation of APR, over **2,000 babies** have been saved! At Crossroads, we inform every client who is considering an abortion about Abortion Pill Reversal. Because an informed decision can be lifesaving to the baby, a client needs to know that APR exists and offers hope to women who want a second chance to save their babies.

#### **Three Lives Saved from Chemical Abortion**

**Andrea's story:** One early Saturday morning, Andrea\* (not her real name) called our Helpline and told us that she had taken Mifepristone the night before and deeply regretted it. She found our website and when she read about APR, she saw hope and a chance to save her baby's life.

We immediately connected Andrea with one of our local APR providers who prescribed the APR regimen for her within a few hours. Later that week, Andrea contacted us to let us know that she and her baby were healthy and growing! Eight months later, Andrea wrote her APR provider: *"You helped me earlier this year with progesterone doses and in doing so my baby was given a second chance. I wanted to share with you that my baby boy was born a couple weeks ago-- strong and healthy as he can ever be. I am eternally thankful and grateful for people like you."* With her note, Andrea included a picture of her beautiful bouncing baby boy! Praise the Lord!!

**Bri's Story:** After taking a couple of home pregnancy tests, Bri\* (not her real name) wasn't ready for what the tests revealed: she was pregnant. Since Bri and her boyfriend were not prepared to be parents, they decided to abort using the Abortion Pill method. After she took Mifepristone, she became extremely sick and about three hours later, she and her boyfriend decided they wanted to try to save their baby. Bri's boyfriend searched online and found the Abortion Pill Reversal hotline number and made the call. He was referred to our local APR provider who arranged for Bri to begin progesterone treatments that day. A few days later, we were contacted to refer her for an ultrasound to see if

"Nothing is more of an alternative to a chemical abortion than **Abortion Pill Reversal**. No woman should need to finish an abortion she regrets—especially when there may be time to save her child's life."

Jor-El Godsey, President  
Heartbeat International

her baby was alive. Not only did Bri's ultrasound reveal the progesterone was working, but it also revealed Bri was pregnant with **TWINS!** Bri and her babies are doing great! To God be all the glory!
